Description of the Event:

On 13th December, 2023 the TechForge Club of New Horizon College of engineering (Computer engineering department) organized a treasure hunt that proved to be a challenge for the participating students.

The hunt seamlessly integrated principles of science, critical thinking and technology, requiring participants to apply their academic knowledge in creative ways. The students were asked to pick chits that had riddles. Once they solved these riddles, they had the next location. Further, it led them back to where they started, the classroom. The final round was a rapid fire round between the first 5 teams to come back to class and the winning team was selected from this.

The treasure hunt provided a unique opportunity for students to showcase their engineering prowess outside the classroom, blending learning with a thrilling adventure that left them with a newfound appreciation for teamwork and problem-solving in their field of study.
